

Ultra-Sonic Technology for Ultra-Reliable, Ultra-Secure Strap Seals and Bonus Cost Savings!

Mosca's patented Sonixs® ultrasonic sealers, available in many Mosca Bundlers and Unitizers, offer major advantages over heat and friction-sealing strapping heads. In addition to delivering secure, reliable seals, Sonixs® sealers can also reduce your operating costs and minimize downtime. Consider the following conservative estimates of cost savings you can realize switching to a Mosca Sonixs® Strapping System!

Reduced Parts Costs - instead of replacing a heater blade in typically two million cycles, the Sonotrode has an expected life of at least five million cycles, saving you about \$200/year.

Reduced Cleaning Time - Sonixs® head requires 30 minutes/month vs. 30 minutes/week for the Standard Sealer, saving you 20 hours/year in maintenance costs. Savings averaging \$1,000/year!

Reduced Preventive Maintenance - Sonixs® is less sensitive to dust, dirt, and uses sealed bearings that do not require lubrication and are unlikely to fail during production. Sonixs® needs only one hour/quarter vs. standard heat sealer requiring one hour/month. Eliminating eight hours/year in labor costs and lost production could easily save you \$800/year.

Purchasing a Sonixs® Strapping System can save you on average, \$2,000/year. Sonixs® sonotrode also comes with a Two Year Warranty, and can run either PP or PET Strap so depending upon market conditions and your product mix, you can switch materials with a simple timing change, possibly saving you even more!
