USP-2
Strapping Machine

- Automatically straps sleeved trays lengthwise without turning
**Standard Features**

- Designed specifically for strapping trays destined for the United States Postal Service, the USP-2/Traymaster straps sleeved mail trays lengthwise, in the direction of the conveyor.
- The USP-2/Traymaster straps automatically at speeds of up to 30 trays per minute, without tray-turning or transfer accessories.
- Excellent reputation while operating in extremely high-cycle, high-speed environments.
- 450+ installations in mailing rooms and U.S.P.S. facilities. Many units regularly strap over one million trays annually.
- System incorporates technologically advanced design and fabrication methods with extremely close tolerances for solid and long-wearing construction.
- Straps all standard corrugated and plastic corrugated full and half-trays with low-cost 5mm plastic strapping.
- System has two operation modes; 'Bypass' and 'Automatic'. In Bypass mode, the conveyor belts run continuously without strapping. Automatic mode straps every bundle with one strap. The conveyor belts move the tray until it trips the photo control switch, which initiates the strapping sequence.
- The system features proven, non-jamming, self-threading strap feed and a highly-reliable tensioning system and sealing head.
- Options include Signal Lights for system fault(s) - early warning for coil change and strap out indicator.

**Technical Data**

- **Production Rate**: Up to 30 Trays/Minute
- **Strap**: 5mm Machine Grade Polypropylene
- **Track Sizes**: no track
- **Electrical Requirements**: 220/440V, 3 Ph, 60 Hz.
- **Strap Seal**: Heat-Seal, Electronic Temperature Controlled
- **Table Height**: Adjustable from 26.6” (675mm) to 36.6” (930mm)
- **Casters**: 4 locking swivel casters
- **Machine Color**: Mosca Blue RAL 5010
- **Machine Shipping Weight**: Approximately 770 Lbs.
- **Options**:
  - Signal Lights for system fault(s)
  - Early Warning for Coil Change
  - Strap Out Indicator
